Choosing a Sleeping Bag

Temperature ratings

Every sleeping bag has three ratings, measured according to the EN ISO 23537 standard:

- Comfort: the temperature at which an average person sleeps comfortably.
- Limit: the lowest temperature for a night curled up, without shivering.
- Extreme: the survival limit only. Never plan a trip around it.

Choose a sleeping bag whose comfort rating is a little below the coldest night you expect.

Northwind Ember sleeping bags

Model	Comfort	Limit	Extreme	Weight	Packed size	Best for
Ember 8	+8 °C	+4 °C	-8 °C	0.9 kg	16 × 25 cm	Summer camping
Ember 0	0 °C	-6 °C	-20 °C	1.5 kg	20 × 32 cm	Spring to autumn, mountains
Ember -10	-10 °C	-16 °C	-32 °C	2.3 kg	24 × 38 cm	Winter trips

All Ember sleeping bags have a two-way zipper, a hood with a drawcord and a storage bag. Two bags of the same model can be zipped together.

Down or synthetic

Down is lighter and packs smaller, but loses its warmth when wet. Synthetic filling stays warm when damp and is easier to wash. Our Ember sleeping bags are synthetic.
